NELORE

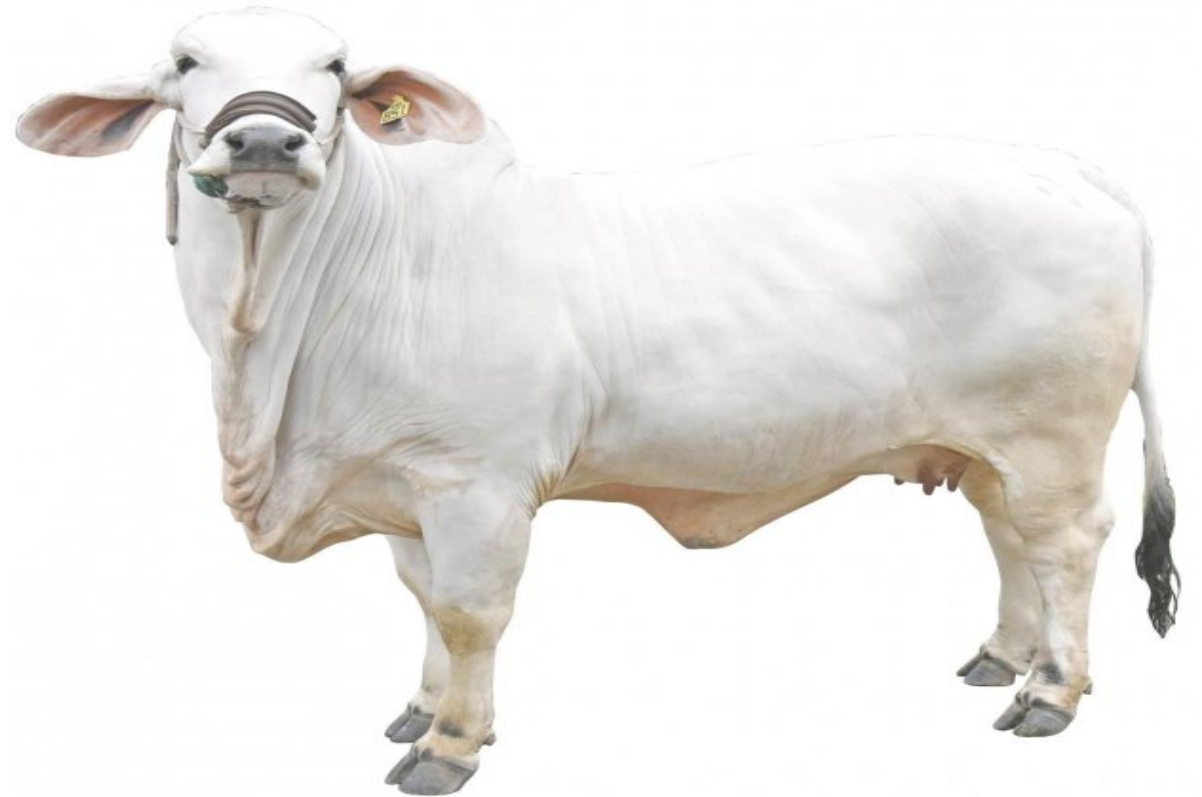

CUTS MAP Mapa de cortes

NELORE

They are animals for meat and milk production but have been used essentially for meat. He is very alive, light and gentle when he is carefully cared for. Predominates in Brazil, Paraguay and Bolivia.

NELORE PARAMETERS

- The adult cow can weigh between 550 and 600 kg, the bull can weigh up to 1,000 kg.
- The calves at birth weigh between 26 and 28 kg.
- Carcass yield varies between 58% to 60%
- The longevity of the cow exceeds 10 years of productive life.

BRAHMAN

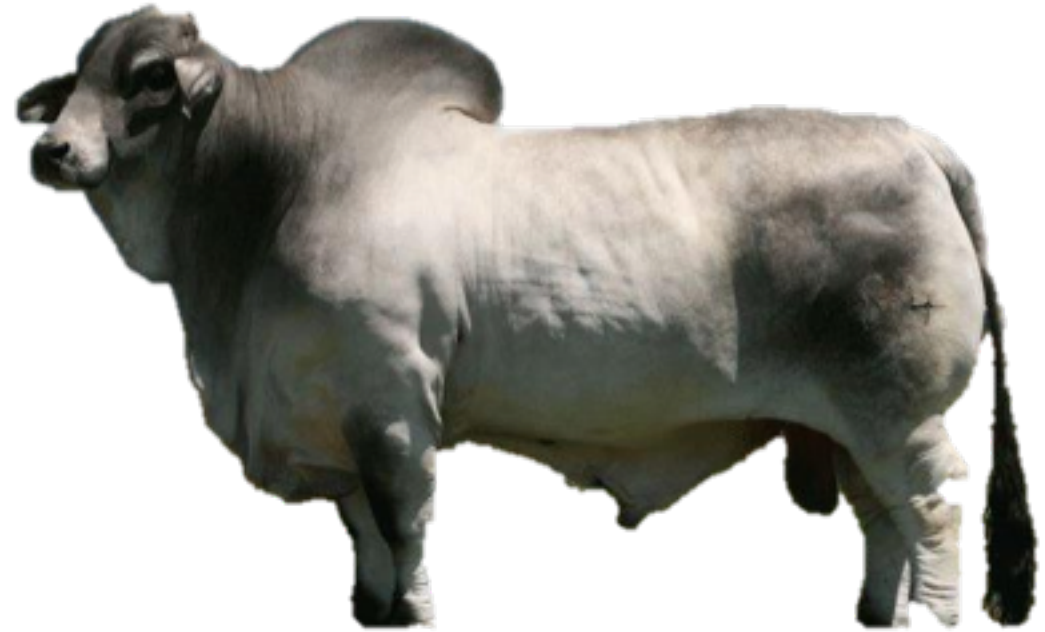

CUTS MAP Mapa de cortes

BRAHMAN

It has a high performance and great ability to produce excellent quality meat, has rapid growth and muscle development, high capacity to produce more meat in less time. It predominates in Colombia and Venezuela.

BRAHMAN PARAMETERS

- The weight of the cow is between 550 kg to 650 kg and that of the bull is 1000 kg.
- The weight of the calves at birth ranges between 30 and 38 kg.
- The average channel yield is 58%.
- The longevity of the cow exceeds 12 years.

ANGUS

Aberdeen Angus is the worldwide recognized breed for its high quality meat production par excellence, it predominates in Argentina.

ANGUS PARAMETERS

- The adult weight of the cows is 500–600 kg; The weight of the bulls is 800 to 1,000 kg.
- The weight of newborn calves is 25–30 kg
- The performance of meat extraction of young bulls is in the range of 60–62%.

HEREFORD

Its ability to fatten pasture has been widely recognized, especially in the quality of the meat. One of the greatest virtues of this breed is to provide the famous "baby beef" highly appreciated in international cuisine. It predominates in Uruguay.

HEREFORD PARAMETERS

- The average weight of adult cows is 550 to 620 kg and that of bulls is 900 to 1,100 kg.
- The yield of clean meat in steers varies between 60 and 63%.

OVERO COLORADO

It is a race that is characterized by being dual purpose but with a tendency to be better for meat production. It is one of the main breeds of meat present in Chile. Steers are fattened up to 500 or 550 kg

OVERO COLORADO PARAMETERS

It has a great rusticity and ability to transform voluminous, fibrous and low digestibility foods.

- The male for slaughter with ideal weights ranging from 500 to 550 kg at 18-24 months of age.
- The performance of the channel at around 56% to 59%.
-

Business Lines

Caribe stock

Its shipping is maritime and depends on the available routes.
